You can

PART 3 - SNS FEEDBACK (bounces and complaints)

Your SNS

Step 1 - Open SNS

1. AWS C

Step 2 - Add HTTPS subscription if missing

1. Click

Step 3 - Confirm subscription

1. Veliv

Step 4 - Allow SES to publish to the topic

1. In S

Step 5 - Link SES configuration set to SNS

Velivoo

PART 4 - IAM PERMISSIONS (API must write to AWS)

Your app

Step 1 - Open IAM

1. AWS C

Step 2 - Attach or update policy

Minimum

Route 53:

- route53

SES:

- ses:Cl

Classic SES (used internally):

- ses:G

For static mode also allow Route 53 changes on the static DNS zone only if you want tight security use a scoped policy on that zone ID.

Step 3 - Test

1. Add a

PART 5 - WHAT YOU ALREADY HAVE (no action needed)

Already configured in your project:

- Route

Customers never need their own AWS account.

QUICK CHECKLIST

Managed mode only:

☐ SES

Managed plus Static branded:

☐ All
